## Chart of the Seasonal Occurrences of Birds in Northwestern Louisiana

## by Jeff Trahan

Copyright 2008: Shreveport Society for NatureStudy - Bird Study Group

## BSG WebSite: http://www.birdstudygroup.org

The following chart depicts the seasonal occurrences of birds in northwestern Louisiana. It is based on approximately 230,000 records in the database of the Shreveport Society for Nature Study--Bird Study Group as of April, 2008. The database includes records of of bird sightings since 1950 from Caddo, Bossier, Bienville, Red River, DeSoto, Webster, Claiborne, and Natchitoches Parishes. Many subjective decisions are made when creating a chart such as this. However, every effort has been made to accurately reflect the data in the database. The species listed are those known to have been observed in the area. Some of these observations have no records in the database and are listed but left blank.

	Abundant the proper habitat. Commonly found in the proper habitat.
	Uncommon to rare, but found occasionally in the proper habitat. Individual Sightings
19	The numbers are dates showing the day of the month in that column.

Frequency of Occurrence (Fr)

This column in the table below is an overall characterization of the frequency of occurrence.

- A Abundant C Common
- U Uncommon
- R Rare
- V Vagrant
